

New Flagship Bench-top DC Power Supply

Compact Wide Range
DC Power Supply

PWR-01 Series

A wide range of voltage and current settings can be combined within its output power rating (3 to 4 times)

LAN (LXI compliant) /USB/RS232C as standard interface

Sequence creation software: Wavy for PWR-01

All models are equipped with front output terminals as standard

Variable internal resistance function

The Bench-top

New flagship bench-top DC power supply

L, ML, MH, and H voltage types. Lineup of 16 models in total!

The PWR-01 is a series of high performance, multifunctional, compact, wide-range DC power supplies. It consists of 16 models in total with 4 maximum voltage outputs (L, ML, MH, and H) and 4 maximum power outputs (400 W, 800 W, 1200 W and 2000 W). The series is equipped with LAN (LXI), USB, and RS232C as standard interfaces that are essential for system integration. The PWR-01 also features front-facing output terminals, variable internal resistance, bleeder ON/OFF functions, CC/CV priority switching function, synchronized operation, various protections, and programmable internal memory.

■Lineup

40 V type

| Туре | Model | Voltage output | Current output | Power output |
|------|----------|----------------|----------------|--------------|
| | PWR401L | | 0 A to 40 A | 400 W |
| L | PWR801L | 0 V to 40 V | 0 A to 80 A | 800 W |
| | PWR1201L | | 0 A to 120 A | 1200 W |
| | PWR2001L | | 0 A to 200 A | 2000 W |

80 V type

| Туре | Model | Voltage output | Current output | Power output |
|------|-----------|----------------|----------------|--------------|
| | PWR401ML | | 0 A to 20 A | 400 W |
| ML | PWR801ML | 0 V to 80 V | 0 A to 40 A | 800 W |
| ML | PWR1201ML | 0 0 10 60 0 | 0 A to 60 A | 1200 W |
| | PWR2001ML | | 0 A to 100 A | 2000 W |

240 V type

| Type | Model | Voltage output | Current output | Power output |
|------|-----------|----------------|----------------|--------------|
| | PWR401MH | | 0 A to 5 A | 400 W |
| MH | PWR801MH | 0 V to 240 V | 0 A to 10 A | 800 W |
| MH | PWR1201MH | | 0 A to 15 A | 1200 W |
| | PWR2001MH | | 0 A to 25.0 A | 2000 W |

650 V type

| Туре | Model | Voltage output | Current output | Power output |
|------|----------|----------------|----------------|--------------|
| | PWR401H | | 0 A to 1.85 A | 400 W |
| Н | PWR801H | 0 V to 650 V | 0 A to 3.70 A | 800 W |
| | PWR1201H | | 0 A to 5.55 A | 1200 W |
| | PWR2001H | | 0 A to 9.25 A | 2000 W |

Universal Communication Interface Combined with Wide Range Output Coverage!

Sequence Function

Synchronized operation using trigger signals

Communication Interface

LAN (LXI compliant) /USB/RS232C as standard interface

Front Output Terminals

Equipped with front output terminal as standard *Up to 10 A

Wide Range

3 to 4 times coverage ratio for voltage and current range

Convenient sequence generation for the PWR-01

Sequence Creation Software

SD027-PWR-01 (Wavy for PWR-01)

Variable Internal Resistance Function

Easy simulation of power supplies carrying internal resistance made possible

Durable Performance

Operating temperature guaranteed up to 50 °C.

*Storage temperature is -25 °C to +60 °C (-13 °F to 140 °F).

Compact Wide Range DC Power Supply

PWR-01 Series

■ Safe and easy to use front-facing output terminals

All models are equipped with front-facing output terminals (up to 10 A) optimized for bench-top use. Please connect to the output terminals with a safety plug. *This product's specifications were recorded using the back-side output terminals.

Safety plugs (Options)

TL41 (screw connection type) Red and black, one set each 1000 V/ CATII max 32 A

TL42 (solder connection type) Red and black, one set each 1000 V/ CATII max 32 A

■ Sequence function

The sequence function allows you to automatically execute programs that you have set in advance, one operation at a time. However, you cannot create sequences using only the panel. Sequence programs are created using commands from a PC.

Once a sequence is executed via remote control, the program is saved onto the PWR-01's internal memory and then can be executed directly from the front panel without a PC.

■ Synchronized operation

Synchronized operation allows for settings and sequence programs to be synchronized via trigger signals. Different PWR-01 models (e.g., 400 W model and 800 W model) can be easily mixed and matched with no difficulties. Synchronized operation is also possible in parallel operation. In order to successfully synchronize your power supplies, please configure various settings using remote control commands. After completing configuration, synchronized operation can be performed without a PC.

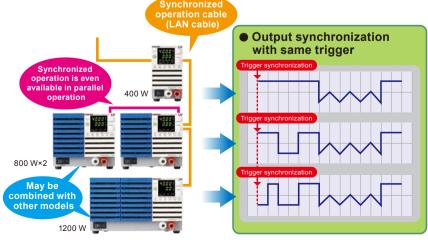

■ Standard communication interface

The series has been equipped with LAN (LXI), USB, and RS232C as standard interfaces, essential for system integration. When using RS232C, please order the D-sub 9P-RJ45 transformation cable (RD-8P/9P) option, sold seperately. The PWR-01 has also been equipped with J1/J2 connectors for analog control.

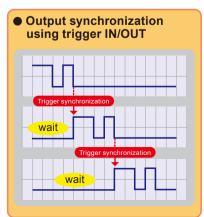

Rear Panel: 400 W model

Sequence Function/Synchronized Operation Concept Map

Output changes can be synchronized with the same trigger signal.

Other PWR-01 series sequences can be restarted in synchronization with the PWR-01 series trigger output.

■ Bleeder ON/OFF function

The PWR-01's capacitor is connected to its output terminals, equipped with a bleeder circuit that discharges electricity when the OUTPUT is set to OFF. For example, when a battery is connected to the output terminal, or when the bleeder circuit is set to ON, the bleeder circuit will discharge electricity from the battery even when the OUTPUT is OFF. In cases like these, excessive electric discharge can be prevented by setting the bleeder circuit to OFF. This makes it possible to prevent current backflow from a battery without using a diode.

| Bleeder circuit | Description | | |
|------------------|--|--|--|
| Off *1 | Bleeder circuit off | | |
| Normal bleeder | Bleeder circuit on | | |
| Hyper bleeder *2 | When a normal bleeder is used, falling time with no load can be shortened to approximately 70% and eliminate test cycle time. This is effective for situations in which one wants to operate ON/OFF with capacitive load as quickly as possible. | | |

^{*1.} Even if the output terminals are open and the output is turned off or the voltage setting is at 0 V, up to several hundred millivolts of voltage may appear across the output terminals.

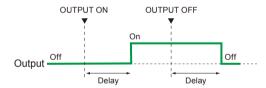

■ Customizable startup when turning on output

You can choose the priority operation mode (CC priority/CV priority) when the output is turned ON.

This can prevent overshoot when turning on the output.

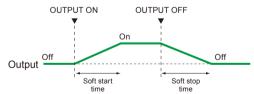

■ Output ON/OFF delay function

You can set the delay (DELAY TIME) from when the OUTPUT key is turned on or off to when the output actually turns on or off. This is useful for tests where precise timing/order of rise and drop voltage is essential according to the load characteristics.

■ Soft start/stop function

You can set the rise time and fall time of output current. This is useful when the load cannot follow the sudden rise or fall in the output current or when you want to avoid the overcurrent protection from being activated.

■ Master-slave parallel operation

One-control parallel operation is performed by designating one "master" device and connecting it to one or more of the same models being the "slave" devices. The entire system can then be controlled by operating the master machine. Output current can be greatly amplified (maximum output current: single rated output current x number of parallel units) with one-control parallel operation. The maximum number of parallel units including the master device is 3 units for the 400 W and 800 W models and 2 units for the 1200 W and 2000 W models. Differences in output voltage and output current between the master and slave devices are within approximately 5% of their respective rated output.

■ Series operation

Up to two units can be connected in series (excluding the H type). The total combined output voltage of the two units is applied to the load. The voltage setting accuracy is the same as the accuracy of an individual unit. *You cannot perform master-slave configuration in series operation.

■ Preset memory function

The preset memory function of the PWR-01 allows you to save up to three combinations of each of the voltage, current, OVP, OCP and UVL values. The saved preset values can be recalled from the preset memory found on the front panel.

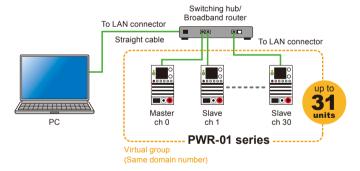

■ CONFIG setting shortcut function

You can register CONFIG setting parameters to the front panel's SC keys. You can perform tests efficiently by registering CONFIG parameters that you use frequently without consulting the CONFIG menu. Up to three parameters can be registered.

■ Multi-channel (VMCB)* *virtual multi-channel bus

When multi-channel (VMCB) is used, one personal computer can be connected to multiple PWR-01 series machines (up to 31 units) to construct a virtual multi-channel power source system. This is effective for matching the control timing of multiple PWR-01 series units and for saving communication ports.

● Basic configuration with LAN interface and VMCB (example)

■ Easy access with a built-in web server

Use a browser from a PC, smartphone, or tablet to access the web server built into the PWR-01 series for convenient control and monitoring.

* Connecting with a smartphone, tablet, etc. requires a Wi-Fi environment (wireless LAN router etc.).

*Screen sample

^{*2.} The fan speed is fixed to the maximum speed.

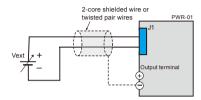

■ External analog control function

The PWR-01 series is equipped with external voltage/resistance control, which is necessary for external analog control and monitoring applications for power supply testing. The input external signal and the output status signal can be accessed through the J1/J2 connectors on the rear panel. When using the J1/J2, please purchase the J1/J2 connector plug kit (OP01-PWR-01) option, sold separately.

Controlling the output voltage & output current.

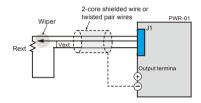

▼Control using an external voltage.

It is possible to control the output voltage/output current of the PWR-01 series by using an external voltage.

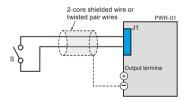

▼Control using an external resistance.

It is possible to control the output voltage/output current of the PWR-01 series by using an external variable resistor.

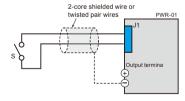

▼Turning output on and off using an external contact.

It is possible to turn the output ON/OFF of the PWR-01 series by using an external contact.

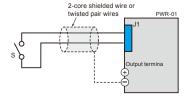

▼Output shutdown control using an external contact.

It is possible to turn the output OFF of the PWR-01 series by using an external contact.

▼Clearing alarms using an external contact.

It is possible to clear the alarm of the PWR-01 series by using an external contact.

▼Monitoring operation modes.

External monitoring of the output voltage and output current.

J1 connector pin arrangement

| 0 87 654 321 | 20 19 18 17 16 15 14 13 13 12 11 | |
|--------------|--|--|
| | | |

| Pin No. | Signal name | Description |
|---------|--------------|---|
| J1-1 | VPGM | Terminal used to control the output voltage with an external voltage or external resistance. 0 V to 5 V; 0 % to 100 % of the rated output voltage (CF12: LO). 0 V to 10 V; 0 % to 100 % of the rated output voltage (CF12: HI). |
| J1-2 | VMON | Output voltage monitor. 0 % to 100 % of the rated output voltage is generated as a voltage between 0 V and 5 V (CF13: LO) or a voltage between 0 V and 10 V (CF13: HI). |
| J1-3 | REF OUT | Reference voltage for external resistance control. 5.25 V (CF12: LO) / 10.5 V (CF12: HI), maximum output current: 2.5 mA. |
| J1-4 | PRL ON | On when parallel operation is in use and when output is on (output through an open-collector photo-coupler) |
| J1-5 | A GND | External signal common for pins 1 to 3, 6 to 9, 11, 12, 14, 16, and 20. When remote sensing is not used, this is at the same electric potential as the negative output terminal. When remote sensing is used, this is at the same electric potential as the negative electrode (<5) of sensing input. |
| J1-6 | ALM CLEAR | Alarm clear terminal. Alarms are cleared when a low level signal (0 V to 0.5 V) is received or shorted. |
| J1-7 | ISUM | Current output terminal for parallel operation. |
| J1-8 | PRL OUT | Positive output terminal for parallel operation. |
| J1-9 | PRL COMP IN | Correction signal input terminal for parallel operation. |
| J1-10 | A GND | External signal common for pins 1 to 3, 6 to 9, 11, 12, 14, 16, and 20. When remote sensing is not used, this is at the same electric potential as the negative output terminal. When remote sensing is used, this is at the same electric potential as the negative electrode (<5) of sensing input. |
| J1-11 | IPGM | Terminal used to control the output current with an external voltage or external resistance. 0 V to 5 V; 0 % to 100 % of the rated output current (CF12: LO). 0 V to 10 V; 0 % to 100 % of the rated output current (CF12: HI). |
| J1-12 | IMON | Output current monitor. 0 % to 100 % of the rated output current is generated as a voltage between 0 V and 5 V (CF13: LO) or a voltage between 0 V and 10 V (CF13: HI). |
| J1-13 | PRL COM | Common for pin 4. |
| J1-14 | PRL ALM | On when a protection function is activated during parallel operation or when an output shutdown signal is being received. |
| J1-15 | A GND | External signal common for pins 1 to 3, 6 to 9, 11, 12, 14, 16, and 20. When remote sensing is not used, this is at the same electric potential as the negative output terminal. When remote sensing is used, this is at the same electric potential as the negative electrode (<s) input.<="" of="" sensing="" td=""></s)> |
| J1-16 | SHUT DOWN | Output shutdown control terminal. The output is turned off when set to LOW (0 V to 0.5 V) or shorted. |
| J1-17 | OUTPUT CONT | Output on/off terminal. On when set to LOW(0 V to 0.5 V) or shorted; off when set to HIGH(4.5 V or 5 V) or open (CF15: LO) On when set to HIGH(4.5 V to 5 V) or open; off when set to LOW(0 V or 0.5 V) or shorted (CF15: HI) |
| J1-18 | PRL COMP OUT | Correction signal output terminal for parallel operation. |
| J1-19 | PRL IN- | Negative input terminal for parallel operation. |
| J1-20 | PRL IN+ | Positive input terminal for parallel operation. |
| | 1 | t to the second |

J2 connector pin arrangement

| Pin No. | Signal name | Description |
|---------|------------------|--|
| J2-1 | STATUS COM | Common for pins 2 to 6. *1 |
| J2-2 | OUT ON STATUS | Outputs a signal when output is on (output through an open-collector photocoupler). *2 |
| J2-3 | PWR ON STATUS | Outputs a low level signal when the power is on (output through an open-collector photocoupler). *2 |
| J2-4 | ALM STATUS | Outputs a signal when a protection function (OVP, OCP, FOCP, OHP, SENSE, AC-FAIL) is activated or when an output shutdown signal is being received (output through an open-collector photocoupler). *2 |
| J2-5 | CV STATUS | Outputs a signal during CV mode (output through an open-collector photocoupler) *2 |
| J2-6 | CC STATUS | Outputs a signal during CC mode (output through an open-collector photocoupler). *2 |

^{*1.} The status common is floating (isolation voltage of 800 V or less). It is isolated from the control circuit.
*2. Open collector output:Maximum voltage: 30 V. Maximum current: 8 mA.

J1 and J2 connectors

CONFIG setting is easy for ON/OFF settings with external contact points that can be easily accessed from the front panel.

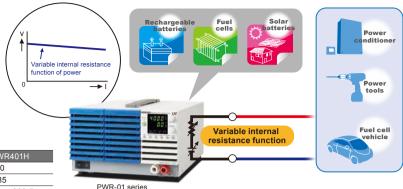

■ Variable internal resistance function

PWR-01 SERIES

COMPACT WIDE RANGE DC POWER SUPPLY

The variable internal resistance function enables you to easily simulate the internal resistance of rechargeable batteries, solar batteries, fuel cells, and the like.

By setting the internal resistance value in constant voltage (CV) mode, you can decrease the output voltage according to the output current. You can use a CONFIG setting to set the internal resistance.

Setting range

| Vrtg | rated output voltage |
|------|----------------------|
| Irtg | rated output current |
| Rint | internal resistance |

0 <Rint (min) ≤Rint (max) L type, ML type: Rint (max)= Vrtg/ Irtg MH type, H type: Rint (max)= Vrtg/ Irtg x 3/4

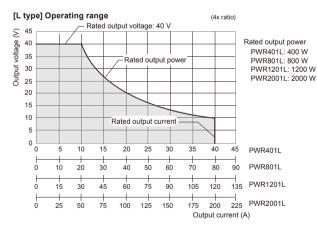

The variable internal resistance function can be configured only in constant voltage(CV) mode.

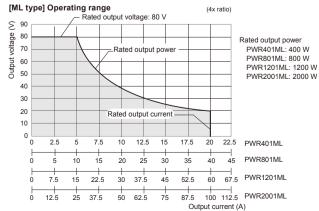

*1. Resolution when FINE is in use

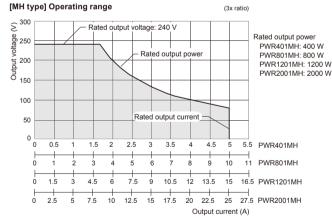

The maximum internal resistance that can be set during parallel operation is the value obtained by dividing Rint (max) during standalone operation by the number of units in parallel operation. The resolution is the value obtained by dividing the resolution during standalone operation by the number of units in parallel operation.

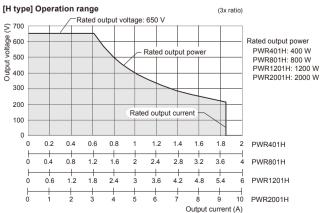

■ 3 to 4 times ratio power operation

3 to 4 times ratio power operating range covers a wide variety of voltage and current setting combinations. For example, the 1200 W rated power output PWR1201ML is capable of seamless operation from 80 V/15 A to 20 V/60 A.

Specifications

Unless specified otherwise, the specifications are for the following settings and conditions.

Loads are pure resistive loads. The product is warmed up for at least 30 minutes (with current flowing). After warm-up, the product must be calibrated correctly in a 23 °C ± 5 °C environment according to the appropriate calibration procedure. Values indicated by "TYP" are typical values. They are not guaranteed performance values. Qualues indicated by "rating" are relings. Qualues indicated by "TYP" are typical values. They are not guaranteed performance values. Qualues indicated by "Tating" are relings. Qualues indicated by "Tsting" are full scale values. They are not guaranteed performance values. Qualues indicated by "Tsting" are relings. Qualues indicated by "Tsting" are full scale values. They are not guaranteed performance values. Qualues indicated by "Tsting" are relings. Qualues indicated by "Tsting" are full scale values. They are full scale values. They are full scale values. They are full scale values with rated output voltage and the voltage that can be output with rated output voltage and the voltage that can be output with rated output voltage. Maximum output voltage with rated output current = Rated output power/ rated output voltage. Maximum output voltage with rated output upon or qual to the maximum output current with rated output voltage? Rated load: Refers to a resistive load that, when the rated output current so the vortex, refers to an open load (no load being connected). In constant-current own with rated output voltage with rated output current? Rated load: Refers to a resistive load that, when the rated output voltage with rated output current. No load:Refers to a resistive load that, when the rated output voltage drop to 10 % of the maximum output voltage with rated output current. - 1. The maximum output voltage and maximum output current are limited by the maximum output power
- Can be limited to approximately 95 % of the OVP trip point or OCP trip point. 85 Vac to 135 Vac or 170 Vac to 265 Vac, fixed load
- The amount of change that occurs when the load is changed from no load to full load (rated output power/rated output voltage) with rated output voltage. The value is measured at the sensing point. The amount of time required for the output voltage to return to a value within "rated output voltage ± (0.1 % +10 mV)." The load current fluctuation is 50 % to 100 % of the maximum current with the set output voltage.
- Measured using an RC-9131C probe that conforms to the JEITA specifications. At the rated output current.
- When the measurement frequency bandwidth is 10 Hz to 20 MHz.
- When the measurement frequency bandwidth is 10 Hz to 1 MHz.
- When the bleeder circuit is set to bleeder normal.
- When the ambient temperature is within 0°C and 50 °C
- Applies to the range of 1 % to 100 % of the rated current. TYP (0.1 % of rating) for 0 % to 1 %.
- *12. When the output voltage is 10 % to 100 % of the rating. At the rated output current.

- 1. Output off or breaker trip on the 2000 W model.

 2. This does not protect against the discharge current peak that is generated from the capacitors inside the PWR-01 output section when the load is changed suddenly.

 3. Available on models with a maximum settable current of 11 A or more. If the OCP value is less
- than the FOCP value, the OCP value takes precedence.

 *4. Auto recovery after eliminating the cause of the alarm is selectable.

| Safety *1 | | Low Voltage Directive 2014/35/EU *2 | | | | | |
| | | EN 61010-1 (Class I *5 , Pollution Degree 2 *6) | | | | | |
| *1 Does not apply to specially ordered or modified products | | | | | | | |

- frequency energy, in the form of electromagnetic radiation, inductive and/or capacitive coupling, for the treatment of material or inspection/analysis purpose.
 *5. This is a Class I instrument. Be sure to ground this product's protective conductor terminal.
- The safety of this product is guaranteed only when the product is properly grounded.
- *6. Pollution is addition of foreign matter (solid, liquid or gaseous) that may produce a reduction of dielectric strength or surface resistivity. Pollution Degree 2 assumes that only non-conductive pollution will occur except for an occasional temporary conductivity caused by condensation.

^{*2.} Category 5; use a straight cable.

^{*1.} Does not apply to specially ordered or modified products.
*2. Limited to products that have a CE mark. Does not apply unless a core is attached to the J1

^{*3.} This is a Class A instrument. This product is intended for use in an industrial environment. This product may cause interference if used in residential areas. Such use must be avoided unless the user takes special measures to reduce electromagnetic emissions to prevent interference to the reception of radio and television broadcasts.

*4. This is a Group 1 instrument. This product does not generate and/or use intentionally radio-

Options

■ AC power cord for 1200 W model AC5.5-3P3M-M4C-VCTF

(not CE/UKCA compliant) Total length 3 m.

■ AC power cord for 2000 W model AC5.5-1P3M-M6C-3S (CE/UKCA compliant) Total length 3 m.

AC5.5-3P3M-M4C-VCTF

■ J1/ J2 connector plug kit OP01-PWR-01

A plug kit for externally controlling the PWR through the J1/ J2 connector. (30 pin pieces. Housing for the J1 connector and J2 connector, 1 piece each)

■ Parallel operation cable (for 2 units in parallel) OP02-PWR-01

■ External control cable and connector set OP03-PWR-01

Cables 20 pcs., length: approx. 500 mm (Crimped on one end) Housing for the J1 connector and J2 connector: 1 piece each, Core: 1 piece

■ RS232C control conversion cable RD-8P/9P

■ Safety plugs TL41 (screw connection type) TL42 (solder connection type)

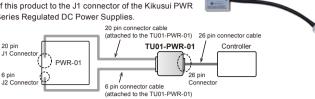

■ Terminal unit

TU01-PWR-01

A terminal unit for converting the J1 and J2 connectors of this product to the J1 connector of the Kikusui PWR Series Regulated DC Power Supplies.

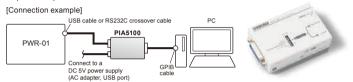

*Output voltage (current) external resistance control and one-control parallel operation (series operation) cannot be converted.

■ GPIB Converter

PIA5100

This converter converts RS232C or USB of the PWR-01 to GPIB, enabling connection of a remote controller using GPIB. [Accessories: Power cord set, Magnetic sheet] *DC 5 V (power supply with commercially-available universal AC adapter etc.) is required to operate the PIA5100.

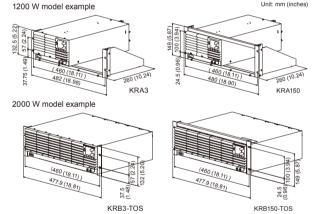

■ Rack mount adapter / Rack mount bracket

For 400 W, 800 W and 1200 W model

KRA3 (EIA inch racks) KRA150 (JIS millimeter racks) For 2000 W model

KRB3-TOS (EIA inch racks) KRB150-TOS (JIS millimeter racks)

■ Application software

Sequence Creation Software SD027-PWR-01 (Wavy for PWR-01)

*Compatible with 400 W, 800 W, 1200 W models only. (2000 W models to be covered later.)

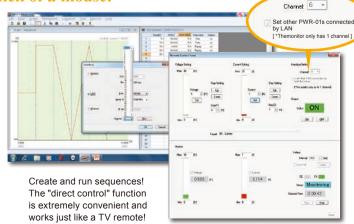

Software that supports automatic testing of a power supply, allowing you to create and edit sequence data with the click of a mouse!

SD027-PWR-01 (Wavy for PWR-01) is an application software that supports sequence creation and the operation for Kikusui power supplies and electronic loads. Wavy allows you to create and edit sequences visually with the click of a mouse and doesn't require programming knowledge. Wavy allows you to control your power supply in almost the same way as a remote controller for monitoring voltage and current, logging, etc.

[Operating environment, conditions]

- Number of power supplies or electronic loads that the Wayy can control is limited to one unit. When a VMCB connection is used, the slave units are controlled at the same time the master unit is controlled.
- CPU: Pentium 4 HT or better (Recommended: Core2 or better) CD-ROM: Necessary to install the "Wavy"
- Mouse: Necessary
- Monitor: 1024 x 768 dots or higher resolution
- Memory: 128MB or more
- Interfaces: LAN, USB, RS232C

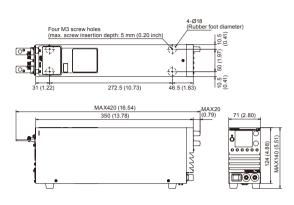

Global commands can be used for batch control of VMCBconnected PWR-01 power supplies!
